

Beechwood NeuroRehab

2014 Outcomes

Our Mission

Beechwood NeuroRehab ensures that individuals with brain injury are able to engage in productive and satisfying life roles. We accomplish this guiding principle through comprehensive rehabilitation therapies and individualized, supported plans for living. Beechwood NeuroRehab recognizes and respects the needs, desires and rights of those we serve, their families, and funding representatives, as we strive to fulfill their expectations for high quality brain rehabilitation and life-long living programs. We use innovative treatment concepts, applied technology, and evidenced-based research to help each individual live a fulfilling life. Beechwood NeuroRehab recognizes and respects the needs, desires and rights of those we serve, their families, and funding representatives, as we strive to fulfill their expectations for high quality brain rehabilitation and life-long living programs.

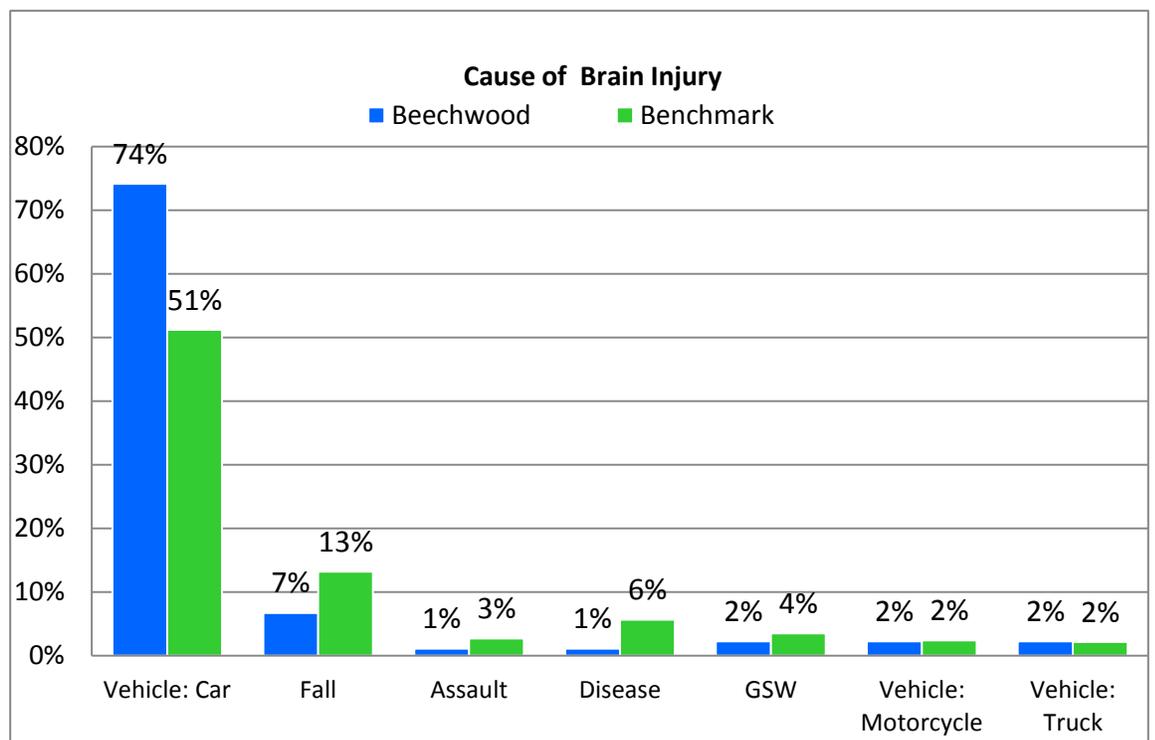

Characteristics of Persons Served

Beechwood NeuroRehab served a total of 102 persons during Fiscal Year 2014, which was an 8.5% increase from the previous period. Approximately 86% are served in the **Residential Program** and approximately 14% are non-residential clients served in the **Outpatient, Structured Day, and Vocational Programs**. This represents an increase in the proportion of outpatients served from the previous period, which

was 10%, and is an intentional shift to making Beechwood NeuroRehab's services more accessible to those living in their own homes in the surrounding communities. Ninety nine percent of all Beechwood NeuroRehab's clients participated in some level of **NeuroRehab Therapies, Structured Day, or Vocational Programs**. In addition to having this productive activity outside their homes, 100% of clients served in **Residential** programs receive a rich individualized schedule of Life Skills Training and Recreational Activities

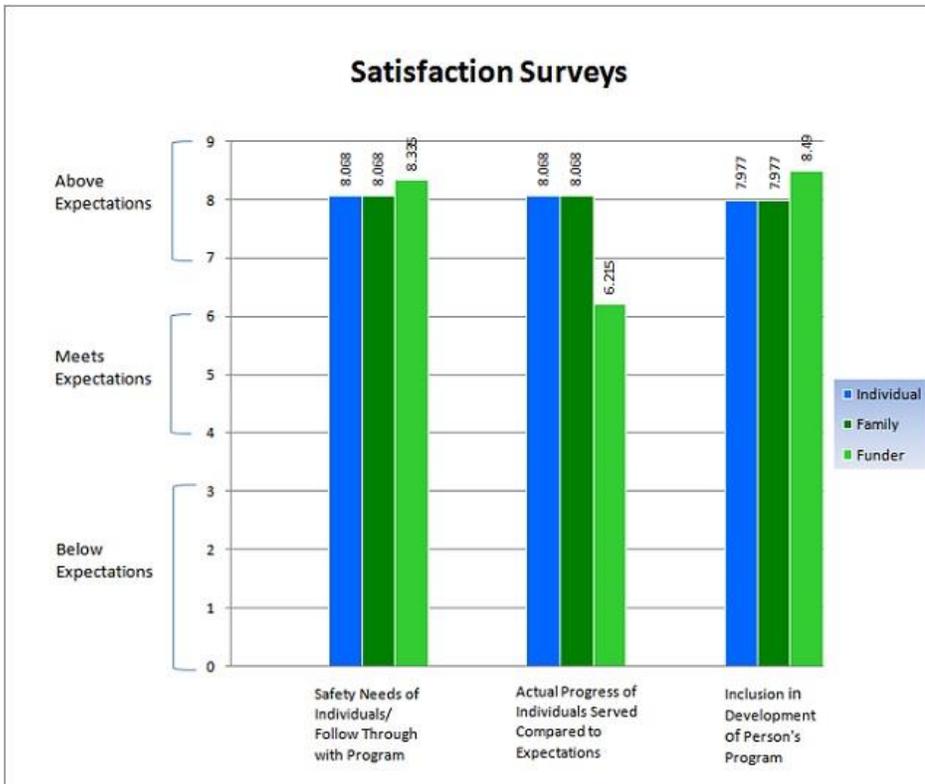

designed to maximize their participation in home and community living. Beechwood NeuroRehab's gender mix includes slightly more females than national statistics would predict, and the age distribution shows an increasing percentage of people over the age of 45. The causes of brain injury are similar to those found by our Benchmark peer providers with the exception that more of our clients' brain injuries were caused by motor vehicle crashes, and less were caused by falls.

Beechwood NeuroRehab

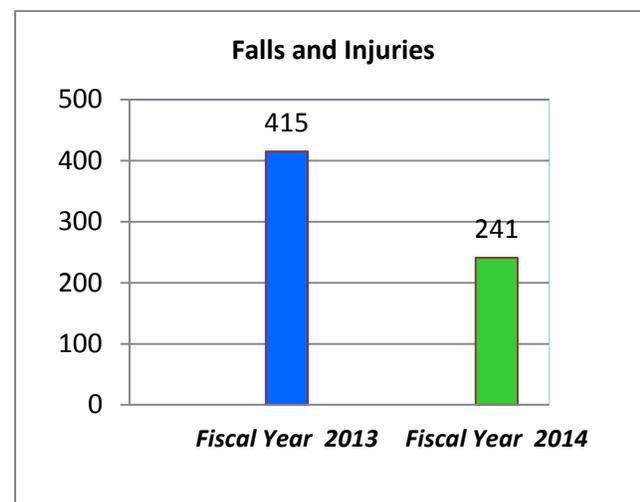

2014 Outcomes

Beechwood NeuroRehab continues to receive mostly “above expectations” Satisfaction Ratings. These ratings are given by the individuals served, their families and funders. Shown here are ratings for Residential programs, from the perspective of the Individuals served, their Families, and their Funders. In terms of meeting the Safety Needs of the Individuals, and assisting them with Following Through on their Program, ratings are consistently **Above Expectations**. In terms of satisfaction with Actual Progress compared with their Expectations, these ratings were **Above Expectations** for Individuals and Families, and **Meets Expectations** for Funders. In terms of feeling Inclusion in Development of the Person’s Program, **Above Expectations** ratings were given by Individuals, Families, and Funders.

Major falls and injuries have decreased since the previous report period.

Beechwood NeuroRehab continually strives to ensure the safety and security of the individuals we serve. Part of that effort includes the development of a **Falls Protocol** that was instituted to analyze the cause and prevention of injury due to falls. The reality of the population we serve is that, as they age, they may face additional challenges both physically and cognitively. Our transdisciplinary team puts into place safety mechanisms and provides guidance to get everyone engaged in the prevention of additional injury. As a result of the **Falls Protocol**, the number of injuries that occurred under the aegis of the residential program evidenced a significant decrease for the current period, down 42% over the previous equivalent reporting period. The graph at the right illustrates that dramatic decrease, and the majority of falls that do occur do not result in serious injury.

Beechwood NeuroRehab is accredited by the Commission on Accreditation of Rehabilitation Facilities (CARF).

Our CARF Medical Rehabilitation Accreditations for Brain Injury Specialty Programs include:

- Outpatient Medical Rehabilitation Program
- Residential Rehabilitation Program
- Vocational Services
- Home and Community Services
